

# GLock Maintenance

September 2025

## Purpose

This document compiles official Glock owner-manual safety guidance and preventive maintenance notes, paraphrased for clarity and quick reference. For full details, always consult the official Glock owner manual for your specific model.

## Safety First (excerpt)

Always treat every firearm as if it is loaded. "Read this entire manual carefully before handling, loading, or firing." (official guidance)

## Cleaning & Preventive Maintenance

Field-strip your pistol into major components for cleaning. Remove carbon and fouling from the slide, barrel, and frame rails using approved solvents and brushes. Apply lubricant sparingly at manufacturer-recommended contact points — too much oil can attract debris and affect performance.

## Lubrication Points (high-level)

Refer to your model's owner manual for model-specific lubrication points. Typical locations: slide rails, barrel exterior where it contacts the slide, and contact surfaces of the locking block and BCG equivalents. Use a light film; wipe away excess.

## Inspection & Parts

Inspect springs, extractor, and locking surfaces for wear or deformation. If your pistol needs parts replacement or deeper service, have it inspected by a certified Glock armorer or contact Glock service.

## Storage & Corrosion Prevention

For longer-term storage, apply a light protective oil to external metal surfaces and store in a cool, dry place. Remove ammunition from stored firearms.

## When to Seek Professional Service

If you experience persistent malfunctions, visible parts damage, or after exceptionally heavy use, send the firearm to a certified Glock armorer or Glock service center for inspection.

## Manufacturer Warranty & Registration

Glock provides warranty and registration information; consult Glock's warranty pages for eligibility, terms, and how to register your pistol.

## **Where to Find Official Manuals**

## **Legal & Safety Reminder**
